

## \ Federation of Grid Resources:

- \* Scalability
- \* Security
- \* policy issues
- \* integration with local site (security, policy, etc.)
- \* multiple requirements amongst different grid projects

## Baseline Software Stack

- \* Enough commonality to make this worthwhile

## Transition to OGS

## Obligations to join OSG

- \* don't need to provide resources

## QoS <-> SLA

- \* enforcement
- \* monitoring

## Tech issues for multiple classes of members

- \* policy implications

## Resource owners & consumers have different needs

- \* different version of software
- \* must publish info to make decisions

## Tech Organization

- \* Alternative tech solutions to adapt to particular sites

## Need simple protocols at the middleware layer

## VO & O management

- \* Federation of Policy

Federation is a way to provide users single view without forcing local changes
